▼ Challenge Description

- Due to heavy workload for the upcoming baby BoneChewerCon event, the website is under maintenance and it errors out, but the debugger is still enabled in production!! I think the devil is enticing us to go and check out the secret key.

Summary

- Poorly configured site allows for user to easily view error file which contains the flag for this “challenge”.

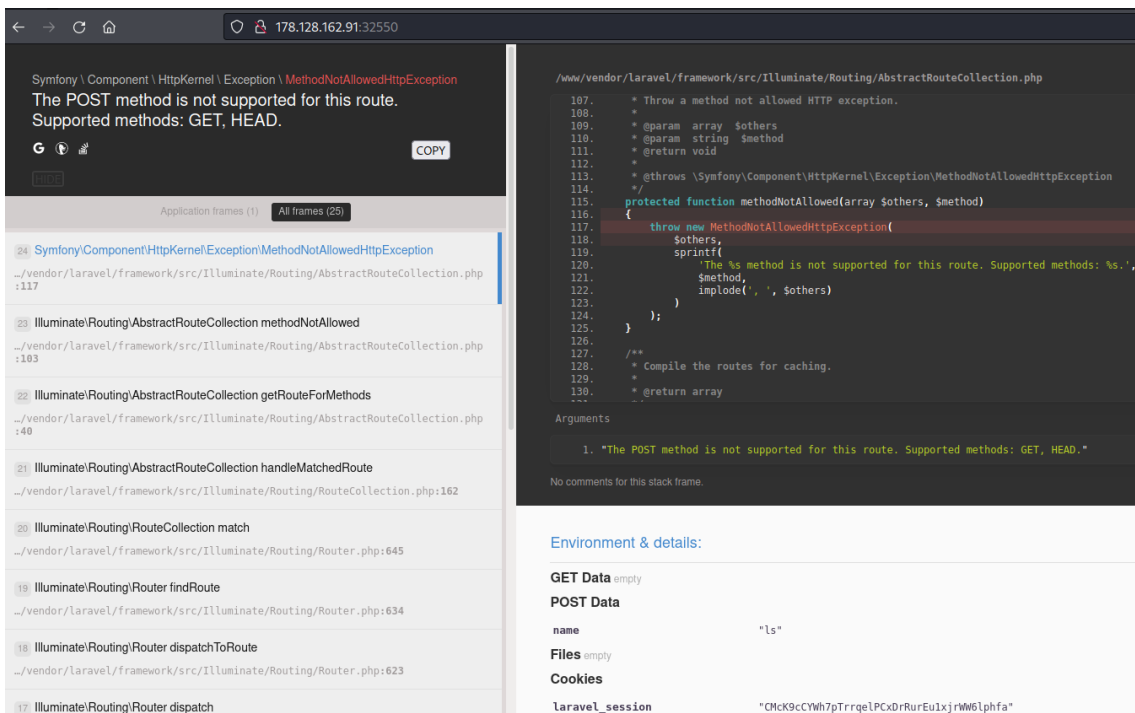

Website

▼ Navigating to the site I see a spot for user input and type `ls` then hit `Register me!`. Which immediately took me to a laravel error page, that if scrolled to the bottom reveals a `APP_Key` or flag.

▼ Website

▼ Error message

▼ Flag

- Sidenote: You don't need to enter any information to view this flag, simply clicking on **Register me!** will still render the same error message page.

Information Learned

- This was a weird “challenge” because I thought there'd be more to it, but the flag is too easy to find.
